RUBRIC: Virtual Machine Setup (Ubuntu Desktop)

Activity: Create, Configure, and Install Ubuntu Desktop on a Virtual Machine

Total Points: 100

Criteria	Excellent (100%)	Proficient (75%)	Developing (50%)	Incomplete (0%)	Score
VM Type & Version (10 pts)	Correctly selects Ubuntu (64-bit) as the OS type and version. Matches the downloaded ISO architecture.	Selects correct type but wrong version (e.g., 32-bit instead of 64-bit) — VM still works.	Selects wrong OS type entirely (e.g., "Other Linux") — needs correction.	Fails to select any valid OS type; cannot proceed.	/10
Memory (RAM) Allocation (15 pts)	Allocates 4-8GB RAM as required. Understands the host system limitation.	Allocates 3GB — 3.5GB (sufficient but slightly below requirement).	Allocates 2GB or less — causes severe lag or installation failure.	Allocates no RAM or invalid value.	/15
Processor (CPU) Allocation (15 pts)	Allocates 4 CPU cores with 100% execution cap. Enables PAE/NX if available.	Allocates 2 cores but does not adjust execution cap or nested VT x settings.	Allocates only 1 core — installation takes extremely long.	Fails to configure processor settings.	/15

Hard Drive (Storage) Setup (20 pts)	Allocates 100 GB dynamically allocated storage (or fixed). Created a partitioning in drive.	Allocates 25GB but chooses wrong disk format (e.g., VHD) — still functional.	Allocates less than 20GB — insufficient for installation.	No hard drive created; VM cannot boot.	/20
ISO Attachment & Boot Order (15 pts)	Correctly attaches the Ubuntu Desktop ISO to the optical drive. Sets boot	Attaches ISO but forgets to adjust boot order — manually boots	Attaches ISO but boot order wrong — VM boots to blank screen.	Fails to attach ISO; VM cannot install.	/15

	order: Optical → Hard Disk .	via "Force BIOS" first time.			
Proper Installation Execution (25 pts)	Completes full installation: partitioning ("Erase disk"), user setup, timezone, keyboard. No errors. Reboots successfully into GUI.	Completes installation but makes minor errors (e.g., wrong timezone — fixes later).	Installation starts but fails midway (partitioning error, corrupt ISO, or power loss).	Installation not attempted or aborted.	/25

TOTAL SCORE: ____ / 100

DOCUMENTATION REQUIREMENT

Student Name: Ravelo, Alex G.

Date: 27/08/2026

VM Name: Ravelo-VM

1. VM Specifications Summary

Component Allocated Value

VM Type / OS Ubuntu (64-bit)

RAM 8 GB (8192 MB) CPU Cores 4

Hard Drive Size 100GB (Dynamic / Fixed) Storage

Controller SATA / SCSI

Network Adapter NAT / Bridged

ISO File Used ubuntu-26.04-desktop-amd64

2. Step-by-Step Setup Process

(Describe what you did, in order. Include commands used, if any.)

1. I opened VM Manager
2. Click Machine
3. Click new
4. A pop up shows on how to Create virtual machine
5. I input my name for my folder
6. Selected an ISO Image (ubuntu-26.04-desktop-amd64)
7. I modified the username, password, and hostname
8. I also modified the hardware. The base memory and processor
9. I change the disk size to 100 GB
10. Summary i doubled checked the info all input and then click finish
11. I waited for the VM to run
12. Once its running and the ubuntu pop ups i finish or input all the required information

13. Once everything is good i proceed to download the ubuntu desktop
14. After the download is done i restarted the ubuntu
15. Waited for it to run and once it run everything is all set up

3. Issues Encountered & Resolutions

(List any problems during setup and how you fixed them.)

Issue	Solution
Corrupted OS on Flash Drive	Uses the stock OS on the Computer Laboratory's file

4. Verification Screenshots

(Paste screenshots here or attach separately)

- VM Settings (Memory, CPU, Storage)
- ISO Attached / Boot Order
- Installation Progress
- Final Desktop with Terminal Open

Created and configured a virtual machine using VirtualBox. The process included selecting the operating system, allocating the required memory and hardware resources, and setting up a virtual hard disk for the virtual machine.

Installed and configure the linux operating system inside the virtual machine. The process included selecting the appropriate installation options, setting the system preferences, creating the necessary user account, and completing the installation until the operating system was ready to use.

Once installation was complete you can now use the operating system.
